

ROV Inspections

ROV is installed on our net-cleaning vessels

Complimentary report with photos and video from the entire operation is always provided with our inspections. We carry out ROV inspections from different vessels equipped with ROVs of different sizes based on the assignment we are booked on.

ROV is installed on our net-cleaning vessels and they can therefore perform both net-cleaning and ROV operations. In addition, we have our own high speed vessels that can carry out inspections in a larger geographical area. These vessels carry out net inspection, check of dead fish, bottom cap inspection and are standby vessels in other operations.
